DBDD¹ and its concrete Hardness

Hints, and their integration into DBDD

Sage Implementation

Example Applications: from real-world to hints

 ¹Distorted Bounded Distance Decoding
 ← Decoding

DBDD and its concrete Hardness

<□▶ < □▶ < □▶ < □▶ < □▶ < □▶ = の < ○ 7/25

DBDD: Distorted Bounded Distance Decoding

Bounded Distance Decoding

- ▶ Given a lattice $\Lambda \subset \mathbb{R}^d$, a target $\mathbf{t} \in \mathbb{R}^d$ and a radius r > 0
- Find the unique $\mathbf{s} \in \Lambda$ such that $\|\mathbf{s} \mathbf{t}\| \leq r$

Distorted Bounded Distance Decoding

Given a lattice
$$\Lambda \subset \mathbb{R}^d$$
, a mean $\mu \in \mathbb{R}^d$ and covariance $\Sigma > 0$

 $\mathsf{DBDD}_{\Lambda,\Sigma,\mu}$

8/25

▶ Find the unique $\mathbf{s} \in \Lambda$ such that $\|\mathbf{s} - \boldsymbol{\mu}\|_{\boldsymbol{\Sigma}} \leq d$ where

$$\|\mathbf{x}\|_{\mathbf{\Sigma}} := \mathbf{x}^t \cdot \mathbf{\Sigma}^{-1} \cdot \mathbf{x} \ge 0.$$

Intuition: Balls are replaced by general Ellipsoids.

DBDD: Distorted Bounded Distance Decoding

Bounded Distance Decoding

- Given a lattice $\Lambda \subset \mathbb{R}^d$, a target $\mathbf{t} \in \mathbb{R}^d$ and a radius r > 0
- Find the unique $\mathbf{s} \in \Lambda$ such that $\|\mathbf{s} \mathbf{t}\| \leq r$

Distorted Bounded Distance Decoding

$$\cdot$$
 Given a lattice $\Lambda \subset \mathbb{R}^d$, a mean $oldsymbol{\mu} \in \mathbb{R}^d$ and covariance $oldsymbol{\Sigma} > oldsymbol{0}$

 $\mathsf{DBDD}_{\Lambda,\Sigma,\mu}$

▶ Find the unique $\mathbf{s} \in \Lambda$ such that $\|\mathbf{s} - \boldsymbol{\mu}\|_{\boldsymbol{\Sigma}} \leq d$ where

$$\|\mathbf{x}\|_{\boldsymbol{\Sigma}} := \mathbf{x}^t \cdot \boldsymbol{\Sigma}^{-1} \cdot \mathbf{x} \ge 0.$$

Intuition: Balls are replaced by general Ellipsoids.

Simplification: Gaussian \simeq Uniform over an Ellipsoid.

Isotropization

Lattice Reduction algorithms are designed for balls.

$$\mathsf{Isotropize}: (\Lambda, \boldsymbol{\Sigma}, \boldsymbol{\mu}) \mapsto (\sqrt{\boldsymbol{\Sigma}^{-1}} \cdot \Lambda, \mathsf{Id}, \sqrt{\boldsymbol{\Sigma}^{-1}} \cdot \boldsymbol{\mu})$$

After isotropization, the instance has the form

$$\mathsf{DBDD}_{\Lambda',\mathsf{Id},\mu'} = \mathsf{BDD}_{\Lambda',\sqrt{d},\mu'}.$$

9/25

Isotropization

Lattice Reduction algorithms are designed for balls.

$$\mathsf{Isotropize}: (\Lambda, \boldsymbol{\Sigma}, \boldsymbol{\mu}) \mapsto (\sqrt{\boldsymbol{\Sigma}^{-1}} \cdot \Lambda, \mathsf{Id}, \sqrt{\boldsymbol{\Sigma}^{-1}} \cdot \boldsymbol{\mu})$$

After isotropization, the instance has the form

$$\mathsf{DBDD}_{\Lambda',\mathsf{Id},\mu'} = \mathsf{BDD}_{\Lambda',\sqrt{d},\mu'}.$$

Concrete hardnessgrows with the dimensionshrink with the volume $Vol(\Lambda') = Vol(\Lambda) / \sqrt{det(\Sigma)}.$

9/25

Isotropization

Lattice Reduction algorithms are designed for balls.

$$\mathsf{Isotropize}: (\Lambda, \boldsymbol{\Sigma}, \boldsymbol{\mu}) \mapsto (\sqrt{\boldsymbol{\Sigma}^{-1}} \cdot \Lambda, \mathsf{Id}, \sqrt{\boldsymbol{\Sigma}^{-1}} \cdot \boldsymbol{\mu})$$

After isotropization, the instance has the form

$$\mathsf{DBDD}_{\Lambda',\mathbf{Id},\mu'} = \mathsf{BDD}_{\Lambda',\sqrt{d},\mu'}.$$

Concrete hardness grows with the dimension d shrink with the volume $Vol(\Lambda') = Vol(\Lambda) / \sqrt{det(\Sigma)}$. Remark Generalizes ad-hoc "rescaling" NTRU, Lizard, NTRUPrime, ...

Trivialize the optimal choice of Kannan's embedding coefficient

<□ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □ ▶ < □

Four types of hints:

- Perfect hints: $\langle \mathbf{s}, \mathbf{v} \rangle = \ell$
- Modular hints: $\langle \mathbf{s}, \mathbf{v} \rangle = \ell \mod k$
- Approximate hints: $\langle \mathbf{s}, \mathbf{v} \rangle \approx \ell$
- Short vector hints: $\mathbf{v} \in \Lambda$

Each hint may affect the dimension of Λ , its volume, and the covariance of Σ in predictible ways.

Four types of hints:

- Perfect hints: $\langle \mathbf{s}, \mathbf{v} \rangle = \ell$
- Modular hints: $\langle \mathbf{s}, \mathbf{v} \rangle = \ell \mod k$
- Approximate hints: $\langle \mathbf{s}, \mathbf{v} \rangle \approx \ell$
- Short vector hints: $\mathbf{v} \in \Lambda$

Each hint may affect the dimension of $\Lambda,$ its volume, and the covariance of $\pmb{\Sigma}$ in predictible ways.

Simplification for this talk: Hints are homogeneous $\ell = 0$.

$$\langle \mathbf{s}, \mathbf{v}
angle = 0$$

Typically, one does **not** get **linear** hints. One needs a bit of creativity to extract some linear hint.

Power-analysis 101: Hamming Weight

◆□▶ ◆□▶ ◆ ■▶ ◆ ■ ・ ● ● の Q · 21/25

One needs a bit of creativity to extract some linear hint.

Power-analysis 101: Hamming Weight

From the scheme design we know $\mathbf{s}_i \in \{-5, \dots, 5\}$

One needs a bit of creativity to extract some linear hint.

Power-analysis 101: Hamming Weight

- From the scheme design we know $\mathbf{s}_i \in \{-5, \dots, 5\}$
- From **power analysis**, we learn $HW(s_0) = 2$

One needs a bit of creativity to extract some linear hint.

Power-analysis 101: Hamming Weight

- ▶ From the scheme design we know $\mathbf{s}_i \in \{-5, \dots, 5\}$
- From **power analysis**, we learn $HW(s_0) = 2$
- ▶ We deduce $\mathbf{s}_0 \in \{3, 5\}$

One needs a bit of creativity to extract some linear hint.

Power-analysis 101: Hamming Weight

- ▶ From the scheme design we know $\mathbf{s}_i \in \{-5, \dots, 5\}$
- From **power analysis**, we learn $HW(s_0) = 2$
- ▶ We deduce $\mathbf{s}_0 \in \{3, 5\}$
- We encode this knowledge with two hints
 - A modular hint: $\langle \mathbf{s}, (1, 0, \dots, 0) \rangle = 1 \mod 2$
 - A approximate hint: $\langle {f s}, (1,0,\ldots,0) \rangle \approx$ 4, with error variance 1

Two single-trace attacks on FrodoKEM [BFM+18]

For the 1^{st} , data leaked, but was too weak for a key-recovery.

Exactly our intended **use-case**.

	NIST1	NIST2	CCS1	CCS2
Attack without hints (bikz)	487	708	239	448
Attack with hints (bikz)	337	471	190	297
Attack with hints & guesses (bikz)	298	403	126	110

Table: Cost of the attacks without/with hints & without/with guesses.

Example 1: Profiling

Two single-trace attacks on FrodoKEM [BFM+18]

For the 1^{st} , data leaked, but was too weak for a key-recovery.

Exactly our intended **use-case**.

	NIST1	NIST2	CCS1	CCS2
Attack without hints (bikz)	487	708	239	448
Attack with hints (bikz)	337	471	190	297
Attack with hints & guesses (bikz)	298	403	126	110

Table: Cost of the attacks without/with hints & without/with guesses.

A decryption failure occurs when the ciphertext's noise w is s.t.

$$\langle \mathbf{s}, \mathbf{w}
angle \geq t := q/4.$$

Brute-forces decryption request with random \mathbf{w} until it triggers.

<□▶ < □▶ < □▶ < □▶ < □▶ < □▶ < □▶ < □> ○ 0 0 23/25

A decryption failure occurs when the ciphertext's noise w is s.t.

$$\langle \mathbf{s}, \mathbf{w} \rangle \geq t := q/4.$$

Brute-forces decryption request with random \mathbf{w} until it triggers.

LWE with Side Information: Attacks and Concrete Security

Example 3: Real-World Specifications

Several real-world schemes (NTRU, LAC, Round5) use ternary secrets, with a fixed amount of 1 and $-1 \Rightarrow$ **perfect hint**:

$$\langle {f s}, (1,1,1,\ldots 1)
angle = \ell$$

	LAC-128	LAC-192	LAC-256	
without hints	509.03	985.64	1104.83	
with 2 hints	505.94	982.74	1101.61	
	$R5ND_{1}KEM_{0d}$	R5ND_{3}KEM_0d	R5ND_{5}KEM_0d	
without hints	494.39	658.67	877.71	
with 1 hint	492.94	657.23	876.24	
			•	
	ntruhps2048509	ntruhps2048677	ntruhps4096821	
without hint	372.58	515.36	617.71	
with 1 hint	371.23	513.95	616.39	

Remark

A few more interesting to be said on NTRU, w.r.t. to the attack of [MS01] exploiting symmetries (update in progress)
